SUMMARY

Computer Science graduate with practical experience in software development, web application development, and AI-assisted development through internship, freelance, academic, and personal projects. Passionate about solving real-world problems using technology and continuously learning modern software engineering and AI technologies.

EDUCATION

Bachelor of Computer Science (Informatics)
Universitas Jenderal Achmad Yani
08/2022 – 12/2025 | Cimahi
GPA: 3.37 / 4.00

CORE EXPERTISE

- Software Development
- Frontend Development
- Web Development
- AI-Assisted Development

PROGRAMMING LANGUAGES

- Python
- Java
- SQL

DATABASE

- PostgreSQL
- MySQL

DEVELOPER TOOLS

- VS Code
- Android Studio
- Git

AI TOOLS

- ChatGPT Codex
- GitHub Copilot
- Antigravity

PROFESSIONAL EXPERIENCE

Frontend Developer - Swap-On

- Freelance | 2026
- Developed responsive user interfaces for a cross-border money transfer application between Indonesia and Japan.
 - Implemented core application features including wallet management, currency exchange, recipient management, money transfer, and transaction history.
 - Built reusable UI components to improve consistency, maintainability, and overall user experience.

Frontend Developer Intern – CMS Refactoring Project

- Dinas Komunikasi dan Informatika Pemerintahan Kota Cimahi
08/2025 – 09/2025 | Cimahi
- Refactored frontend modules of an internal CMS application to improve code maintainability, readability, and overall structure.
 - Debugged and optimized existing frontend features by identifying and resolving user interface issues.
 - Collaborated with the development team to implement code improvements and maintain consistency across the application.

Teaching Assistant (Artificial Intelligence)

- Universitras Jenderal Achmad Yani
03/2025 – 07/2025 | Cimahi
- Assisted the implementation of Artificial Intelligence practical sessions by guiding students in understanding fundamental AI concepts and programming workflows. Provided technical support during laboratory activities, helped troubleshoot programming issues, and evaluated student assignments to ensure learning objectives were achieved.

PROJECTS

Warehouse Management System

- System Analyst & Full-Stack Developer
- Analyzed requirements and designed system architecture for a Warehouse Management System.
 - Developed UML documentation, user flows, and technical specifications.
 - Designed and implemented role-based interfaces for Admin and Driver workflows.
 - Built a scalable monorepo using Next.js, NestJS, PostgreSQL, and Prisma.

Management Dashboard

- Frontend Developer
- Developed a management dashboard using Nuxt 4 and Vue.js with a focus on scalable architecture and reusable components.
- Built task, project, milestone, and activity management features.
 - Implemented dynamic filtering, status tracking, analytics, and interactive modals.
 - Developed Nitro API services and integrated CRUD operations with persistent data storage.
 - Refactored the codebase to improve maintainability, consistency, and user experience.

Mobile Image Editing Application

- Digital Image Processing
- Developed an Android application for basic digital image processing.
- Implemented RGB channel extraction and histogram visualization.
 - Applied image processing concepts using Java and Android Studio.

PUBLICATIONS

Brain–Computer Interface of Motor Imagery EEG Signal Using Hybrid GNN-Mamba Networks

- International Conference on Informatics and Computing (ICIC 2025)
- Conducted research on brain–computer interface using motor imagery EEG signals.
 - Implemented and evaluated machine learning approaches for EEG signal classification.
 - Produced technical documentation resulting in publication at IEEE ICIC 2025.
